Lambda: Beyond The Basics

Luc Duponcheel (ImagineJ)

ImagineJ

Function

Function

ImagineJ

Cbn

```
// Cbn<Z> zName = ...;
// Z zValue = zName._();

// in what follows we name cbn parameters like cbv ones

public interface Cbn<Z> {
 Z _();
}
```

3

ImagineJ

Block

```java
// Block block = ...;
// block._();

public interface Block {
 void _();
}
```

ImagineJ

Function

```
// Z z = ...;
// Function<Z, Y> z2y = ...;
// Y y = z2y._(z);

public interface Function<Z, Y> {
 Y _(Z z);
}
```

ImagineJ

FunctionStatics

```
public class FunctionStatics {
 public static <Z>
 Z identity(Z z) {
  return z;
 }
}
```

ImagineJ

BiFunction

```
// Z z = ...;
// Y y = ...;
// BiFunction<Z, Y, X> zny2x = ...;
// X x = zny2x._(z, y);

public interface BiFunction<Z, Y, X> {
 X _(Z z, Y y);
}
```

ImagineJ

Ref

```
public class Ref<Z> {
 private Z value;

 public Z deref() {
  return value;
 }

 public void assign(Z value) {
  this.value = value;
 }
}
```

Lambda: Beyond The Basics

ImagineJ

while (CbnApp)

```
private static Function<Block, Block> _while(
 Cbn<Boolean> cond
) {
 return
  block ->
   () -> {
    if (cond._()) {
     block._();
     _while(cond)._(block)._();
    }
    ;
   };
}
```

Lambda: Beyond The Basics

ImagineJ

example (CbnApp)

```
// before 0
// after 10

public static void main(String[] args) {
 Ref<Integer> integerRef = new Ref<>();
 integerRef.assign(0);
 System.out.println("before " + integerRef.deref());
 _while(() ->
  (integerRef.deref() < 10))._(() -> {
  integerRef.assign(integerRef.deref() + 1);
 })._();
 System.out.println("after " + integerRef.deref());
}
```

Option

Option

ImagineJ

Option

```
public interface Option<Z> {
```

ImagineJ

Some

```
final public class Some<Z>
 implements Option<Z> {

 final Z value;
```

Lambda: Beyond The Basics

ImagineJ

None

```
final public class None<Z>
 implements Option<Z> {
```

Lambda: Beyond The Basics

ImagineJ

fold (Option)

```
// abstract method
// follows the structure of Option

public <Y>
Y fold(
 final Function<Z, Y> z2y,
 final Cbn<Y> y
);
```

Lambda: Beyond The Basics

ImagineJ

fold (Some)

```
// uses z2y

@Override
public <Y>
Y fold(
 final Function<Z, Y> z2y,
 final Cbn<Y> y
) {
 return
  z2y._(value);
}
```

fold (None)

```
// uses y

@Override
public <Y>
Y fold(
 final Function<Z, Y> z2y,
 final Cbn<Y> y
) {
 return
  y._();
}
```

Lambda: Beyond The Basics

ImagineJ

some (OptionStatics)

```
// factory method (used in library code)
// not part of application programmer DSL

public static <Z>
Option<Z> some(
 final Z value
) {
 return
  new Some<>(value);
}
```

none (OptionStatics)

```
// factory method (used in library code)
// not part of application programmer DSL

public static <Z>
Option<Z> none(
) {
 return
  new None<Z>();
}
```

ImagineJ

identity (Option)

```
default public Option<Z> identity() {
 return
  fold(
   OptionStatics::some,
   OptionStatics::none
   );
}
```

Lambda: Beyond The Basics

ImagineJ

length (Option)

```
default public int length() {
 return
  fold(
   z -> 1,
   () -> 0
  );
}
```

Lambda: Beyond The Basics

ImagineJ

bindM (Option)

```java
// binding is fundamental (functional) programming concept

default public <Y>
Option<Y> bindM(
 final Function<Z, Option<Y>> z2oy
) {
 return
  fold(
   z2oy,
   OptionStatics::none
  );
}
```

Lambda: Beyond The Basics

ImagineJ

one (OptionStatics)

```
// multiplicative method

public static <Z>
Option<Z> one(
 final Z z
) {
 return
  some(z);
}
```

ImagineJ

bindF (Option)

```
// typically used at the end of a binding chain

default public <Y>
Option<Y> bindF(
 final Function<Z, Y> z2y
) {
 return
  bindM(z ->
   one(z2y._(z))
   );
}
```

Lambda: Beyond The Basics

ImagineJ

bindA (Option)

```
// multiplicative method
// note: z is only used within the scope of bindF

default public <Y>
Option<Y> bindA(
 final Option<Function<Z, Y>> o_z2y
) {
 return
  bindM(z ->
   o_z2y.bindF(z2y ->
    z2y._(z)
    )
   );
}
```

Lambda: Beyond The Basics

ImagineJ

example01 (OptionApp)

```
// example01 = one(abc)

Option<String> example01 =
 one("a").bindM(a ->
  one("b").bindM(b ->
   one("c").bindM(c ->
    one(a + b + c)
   )
  )
 );
```

Lambda: Beyond The Basics

ImagineJ

example02 (OptionApp)

```
// example02 = one(abc)

Option<String> example02 =
 one("a").bindM(a ->
  one("b").bindM(b ->
   one("c").bindF(c ->
    a + b + c
    )
   )
  );
```

ImagineJ

example03 (OptionApp)

```
// example03 = one(abc)

Option<String> example03 =
 one("a").bindA(
  one("b").bindA(
   one("c").bindF(c -> b -> a ->
    a + b + c
    )
   )
  );
```

Lambda: Beyond The Basics

ImagineJ

zero (OptionStatics)

```
// additive method

public static <Z>
Option<Z> zero(
) {
 return
  none();
}
```

ImagineJ

example04 (OptionApp)

```
// example04 = zero

Option<String> example04 =
 one("a").bindM(a ->
  zero().bindM(z ->
   one("c").bindF(c ->
    a + z + c
   )
  )
 );
```

example05 (OptionApp)

```
// example05 = zero

Option<String> example05 =
 one("a").bindA(
  zero().bindA(
   one("c").bindF(c -> z -> a ->
    a + z + c
   )
  )
 );
```

ImagineJ

choice (Option)

```
default public Option<Z> choice(
 final Function<Z, Boolean> z2b,
 final Function<Z, Option<Z>> t_z2oz,
 final Function<Z, Option<Z>> f_z2oz
) {
 return
  bindM(z ->
   z2b._(z)
    ? t_z2oz._(z)
    : f_z2oz._(z)
  );
}
```

filter (Option)

```
default public Option<Z> filter(
 final Function<Z, Boolean> z2b
) {
 return
  choice(
   z2b,
   z -> one(z),
   z -> zero()
  );
}
```

example06 (OptionApp)

```
// example06 = one(c)

Option<String> example06 =
 one("a").choice(a ->
  a.equals("b"),
  a -> one("b"),
  a -> one("c")
 );
```

Lambda: Beyond The Basics

ImagineJ

example07 (OptionApp)

```
// example07 = zero

Option<String> example07 =
 one("a").filter(a ->
  a.equals("b")
 );
```

Lambda: Beyond The Basics

ImagineJ

plus (Option)

```
// additive method

default public Option<Z> plus(
 final Cbn<Option<Z>> _2oz
) {
 return
  fold(
   OptionStatics::some,
   _2oz
  );
}
```

Lambda: Beyond The Basics

ImagineJ

someOptions (OptionApp)

```
private static final
Option<String> oneA_plus_oneB =
 one("a").plus(() -> one("b"));
private static final
Option<String> oneC_plus_oneD =
 one("c").plus(() -> one("d"));
```

Lambda: Beyond The Basics

ImagineJ

someOptionsUsingZero (OptionApp)

```
private static final
Option<String> oneA_plus_zero =
 one("a").plus(() -> zero());
// note: sometimes we have to help the type inferencer
private static final
Option<String> zero_plus_oneA =
 OptionStatics.<String>zero().plus(() -> one("a"));
```

ImagineJ

example08 (OptionApp)

```
// example08 = one(a)

Option<String> example08 =
 oneA_plus_oneB;
```

ImagineJ

example09 (OptionApp)

```
// example09 = one(a)

Option<String> example09 =
 oneA_plus_zero;
```

Lambda: Beyond The Basics

ImagineJ

example10 (OptionApp)

```
// example10 = one(a)

Option<String> example10 =
 zero_plus_oneA;
```

ImagineJ

example11 (OptionApp)

```
// example11 = one(ac)

Option<String> example11 =
 oneA_plus_oneB.bindM(apb ->
  oneC_plus_oneD.bindF(cpd ->
   apb + cpd
  )
 );
```

Lambda: Beyond The Basics

ImagineJ

example12 (OptionApp)

```
// example12 = one(a)

Option<String> example12 =
 oneA_plus_oneB.identity();
```

ImagineJ

example13 (OptionApp)

```
// example13 = 1

int example13 =
 oneA_plus_oneB.length();
```

ImagineJ

Stream

Stream

ImagineJ

Stream

```
public interface Stream<Z> {
```

ImagineJ

More

```
final public class More<Z>
 implements Stream<Z> {

 final Z current;
 final Cbn<Stream<Z>> next;
```

Done

```
final public class Done<Z>
 implements Stream<Z> {
```

ImagineJ

fold (Stream)

```
// abstract method
// follows the recursive structure of Stream

public <Y>
Y fold(
 final BiFunction<Z, Cbn<Y>, Y> zny2y,
 final Cbn<Y> y
);
```

Lambda: Beyond The Basics

ImagineJ

```
@Override
public <Y>
Y fold(
 final BiFunction<Z, Cbn<Y>, Y> zny2y,
 final Cbn<Y> y
) {
 return
  zny2y._(
   current,
   () -> next._().fold(zny2y, y)
  );
}
```

Lambda: Beyond The Basics

ImagineJ

fold (Done)

```java
@Override
public <Y>
Y fold(
 final BiFunction<Z, Cbn<Y>, Y> zny2y,
 final Cbn<Y> y
) {
 return
  y._();
}
```

Lambda: Beyond The Basics

ImagineJ

more (StreamStatics)

```
public static <Z>
Stream<Z> more(
 final Z current,
 final Cbn<Stream<Z>> next
) {
 return
  new More<>(current, next);
}
```

ImagineJ

done (StreamStatics)

```
public static <Z>
Stream<Z> done(
) {
 return
  new Done<>();
}
```

Lambda: Beyond The Basics

ImagineJ

identity (Stream)

```
default public Stream<Z> identity() {
 return
  fold(
   StreamStatics::more,
   StreamStatics::done
  );
}
```

Lambda: Beyond The Basics

ImagineJ

length (Stream)

```
default public Integer length() {
 return
  fold(
    (z, l) -> 1 + l._(),
    () -> 0
   );
}
```

ImagineJ

zero (StreamStatics)

```
public static <Z>
Stream<Z> zero(
) {
 return
  done();
}
```

Lambda: Beyond The Basics

ImagineJ

plus (Stream)

```
default public Stream<Z> plus(
 final Cbn<Stream<Z>> sz
) {
 return
  fold(
   StreamStatics::more,
   sz
  );
}
```

ImagineJ

bindM (Stream)

```
default public <Y>
Stream<Y> bindM(
 final Function<Z, Stream<Y>> z2sy
) {
 return
  fold(
   (z, sy) -> z2sy._(z).plus(sy),
   StreamStatics::zero
  );
}
```

Lambda: Beyond The Basics

ImagineJ

one (StreamStatics)

```
public static <Z>
Stream<Z> one(
 final Z z
) {
 return
  more(z, StreamStatics::done);
}
```

Lambda: Beyond The Basics

ImagineJ

example01 (StreamApp)

```
// example01 = one(abc) : zero

Stream<String> example01 =
 one("a").bindM(a ->
  one("b").bindM(b ->
   one("c").bindM(c ->
    one(a + b + c)
    )
   )
  );
```

Lambda: Beyond The Basics

ImagineJ

example02 (StreamApp)

```
// example02 = one(abc) : zero

Stream<String> example02 =
 one("a").bindM(a ->
  one("b").bindM(b ->
   one("c").bindF(c ->
    a + b + c
    )
   )
  );
```

Lambda: Beyond The Basics

ImagineJ

example03 (StreamApp)

```
// example03 = one(abc) : zero

Stream<String> example03 =
 one("a").bindA(
  one("b").bindA(
   one("c").bindF(c -> b -> a ->
    a + b + c
    )
   )
  );
```

ImagineJ

example04 (StreamApp)

```
// example04 = zero

Stream<String> example04 =
 one("a").bindM(a ->
  zero().bindM(z ->
   one("c").bindF(c ->
    a + z + c
    )
   )
  );
```

Lambda: Beyond The Basics

ImagineJ

example05 (StreamApp)

```
// example05 = zero

Stream<String> example05 =
 one("a").bindA(
  zero().bindA(
   one("c").bindF(c -> z -> a ->
    a + z + c
    )
   )
  );
```

Lambda: Beyond The Basics

ImagineJ

example06 (StreamApp)

```
// example06 = one(c) : zero

Stream<String> example06 =
 one("a").choice(a ->
  a.equals("b"),
  a -> one("b"),
  a -> one("c")
 );
```

Lambda: Beyond The Basics

ImagineJ

example07 (StreamApp)

```
// example07 = zero

Stream<String> example07 =
 one("a").filter(a ->
  a.equals("b")
 );
```

Lambda: Beyond The Basics

ImagineJ

example08 (StreamApp)

```
// example08 = one(a) : one(b) : zero

Stream<String> example08 =
 oneA_plus_oneB;
```

ImagineJ

example09 (StreamApp)

```
// example09 = one(a) : zero

Stream<String> example09 =
 oneA_plus_zero;
```

ImagineJ

example10 (StreamApp)

```
// example10 = one(a) : zero

Stream<String> example10 =
 zero_plus_oneA;
```

ImagineJ

example11 (StreamApp)

```
// example11 = one(ac) : one(ad) : one(bc) : one(bd) : zero

Stream<String> example11 =
 oneA_plus_oneB.bindM(apb ->
  oneC_plus_oneD.bindF(cpd ->
   apb + cpd
  )
 );
```

ImagineJ

example12 (StreamApp)

```
// example12 = example12 = one(a) : one(b) : zero

Stream<String> example12 =
 oneA_plus_oneB.identity();
```

Lambda: Beyond The Basics

ImagineJ

example13 (StreamApp)

```
// example13 = 2

int example13 =
 oneA_plus_oneB.length();
```

Lambda: Beyond The Basics

ImagineJ

take (Stream)

```
// note: a stream can be infinite

public Stream<Z> take(
 int n
);
```

ImagineJ

```
@Override
public Stream<Z> take(
 int n
) {
 return
  (n > 0)
   ? more(
   current,
   () -> next._().take(n - 1)
  )
   : done();
}
```

Lambda: Beyond The Basics

ImagineJ

take (Done)

```
@Override
public Stream<Z> take(
 int n
) {
 return
  done();
}
```

Lambda: Beyond The Basics

ImagineJ

infinitelyMany (StreamApp)

```java
private static <Z>
Stream<Z> infinitelyMany(
 Z z
) {
 return
  one(z).plus(
   () -> infinitelyMany(z)
  );
}
```

Lambda: Beyond The Basics

ImagineJ

example14 (StreamApp)

```
// example14 = one(a) : one(a) : one(a) : one(a) : zero

Stream<String> example14 =
 infinitelyMany("a").take(4);
```

ImagineJ

fibonacciNumbersFrom (StreamApp)

```java
private static Stream<Integer> fibonacciNumbersFrom(
 Integer fib0,
 Integer fib1
) {
 return
  one(fib0).plus(
    () -> fibonacciNumbersFrom(fib1, fib0 + fib1)
  );
}
```

Lambda: Beyond The Basics

ImagineJ

example15 (StreamApp)

```
// example15 = one(1) : one(2) : one(3) : one(5) : zero

Stream<Integer> example15 =
 fibonacciNumbersFrom(1, 2).take(4);
```

ImagineJ

lift (StreamStatics)

```
// cbn version of one

public static <Z>
Cbn<Stream<Z>> lift(
 final Cbn<Z> z
) {
 return
  () -> one(z._());
}
```

Lambda: Beyond The Basics

ImagineJ

liftF (StreamStatics)

```
// static version of bindF

public static <Z, Y>
Function<Stream<Z>, Stream<Y>> liftF(
 final Function<Z, Y> z2y
) {
 return
  sz ->
    sz.bindF(z2y);
}
```

Lambda: Beyond The Basics

ImagineJ

liftA (StreamStatics)

```
// static version of bindA

public static <Z, Y>
Function<Stream<Z>, Stream<Y>> liftA(
 final Stream<Function<Z, Y>> s_z2y
) {
 return
  sz -> sz.bindA(s_z2y);
}
```

Lambda: Beyond The Basics

ImagineJ

liftBF (StreamStatics)

```
public static <Z, Y, X>
BiFunction<Stream<Z>, Cbn<Stream<Y>>, Stream<X>> liftBF(
 final BiFunction<Z, Cbn<Y>, X> zny2x
) {
 return
  (sz, sy) ->
   sz.bindA(
    sy._().bindF(y -> z ->
     zny2x._(z, () -> y)
    )
   );
}
```

Lambda: Beyond The Basics

ImagineJ

foreachDeclaration (Stream)

```
default public <Y, X, MY, MX>
Function<Function<Z, MY>, MX> foreach(
 final Cbn<X> x,
 final BiFunction<Y, Cbn<X>, X> ynx2x,
 final Function<Cbn<X>, Cbn<MX>> lift,
 final Function<
  BiFunction<Y, Cbn<X>, X>,
  BiFunction<MY, Cbn<MX>, MX>
  > liftBF
)
```

Lambda: Beyond The Basics

ImagineJ

foreachDefinition (Stream)

```
{
 return
  z2my ->
   fold(
    (z, mx) -> liftBF._(ynx2x)._(z2my._(z), mx),
    lift._(x)
   );
}
```

ImagineJ

foreachToOption (Stream)

```
default public <Y, X>
